Summa Cum Laude

Experience

Google

Software Engineer *Sept. 2016–Present*

- Lead frontend development on multiple projects, taking them through product design, UX, development, launch, and landing
- Designed key aspects of Greentea, Google's custom CRM, including integration with the support ticket system and tracking of customer centric metrics used by 20k ad sellers
- Member of Dart readability team, one of ~40 engineers selected across Google based on exceptional code review skills
- Co-owner of custom configuration language used to power all tables, forms, and charts in Google Ads and Greentea

App Academy

Engineering Apprentice *May 2016–July 2016*

- Crafted new Ruby and Javascript curriculum and RSpec testing suites

Projects

Resume

Live | GitHub

You're reading it!

- Hand rolled HTML/Sass/Typescript
- Animations for the web while still styled for print

Constellations

Live | GitHub

Conway's Game of Life simulator

- Implemented HTML5 canvas rendering with controls for pan, zoom, and cycle speed
- Bound UI events in jQuery for user manipulation

PickupTix

GitHub

Fullstack event ticketing app built in Rails and React

- Build a dynamic show filter using ActiveRecord to combine arbitrary filter options into a single query
- Mapped JSON data to build interactive seat picker for more engaging point-and-click UI
